Each reef is 5ft X 5ft X 2ft in size and composed of 90 concrete block seconds. All sites are located in water depths of 8 feet or more, and all sites but those off Picciola Point are accessible from a dock or pier. Other sites have been identified and will be constructed when more block seconds are available. We will place signs on each pier or dock to notify anglers that fishing reefs are present. A news release with GPS locations and a map for all of the sites will be shared as soon as the program is completed.
