

Good Morning Council Members:

This is being presented by:

Name: John Hecimovich

Reside at: 28714 Tammi Drive

Phone: 352-343-5355

Questions:

On July 13th Mr. Perry gave a presentation to this Council about a core sample that was taken out of the AB Canal system. He stated that the sample showed that the muck clogging the Tammi Drive Canal did not come from Lake Apopka or the Nurf Plant. **By the way the Core Sample that Mr. Perry obtained was never officially tested by a state or private laboratory, it was only his opinion.**

1.) Why is no other evidence being considered as to how our canal became clogged with the muck?

LCWA Board Members stated that Tammi Drive Canal is private and that LCWA has no responsibility to clean the muck out of our canal.

2.) Then why take a Core Sample if you are claiming no responsibility?

In the years leading up to the 2013 dredging, polluted water from Lake Apopka flowed through the AB Canal and muck flowed into Tammi Drive Canal. Eventually it was dredged and our canals were cleaned out. In 2017 after Hurricane Irma, the polluted water and muck flowed heavily through the AB Canal and according to Mr. Perry and his core sample, this polluted water and muck never entered the Tammi Drive Canal.

3.) Can someone PLEASE explain how this muck flowed past Tammi Drive Canal without entering it and clogging it?
